RESEARCH INTERESTS

My research examines how moral emotion shapes behavior in the attention economy.

Measurement. I build computational frameworks for detecting moral emotions from text and video, using transformer-based models and multimodal architectures. Applying these methods reveals a consistent pattern: moral outrage — expressions that blame and condemn others — most strongly predicts committed user participation, outpacing other moral and emotional appeals. I am also developing explainable AI techniques to make these models interpretable.

Behavioral Effects. I trace the downstream reach of this finding. Does the outrage effect extend to offline political behavior? Does it hold when manufactured by malicious actors? And do LLMs that deploy moral outrage become more politically persuasive?
